Mr. Jeroen van der Veer,
Chief Executive
Royal Dutch Shell

Mr. Jorma Ollila
Chairman of the Board
Royal Dutch Shell

Re: Coalbed Methane Drilling in the Sacred Headwaters (Klappan)

Dear Mr. van der Veer and Mr. Ollila:

It is our understanding that Royal Dutch Shell is planning to proceed with coalbed methane drilling in the Sacred Headwaters this year. This raises some important issues.

The Sacred Headwaters, located in the Northwestern region of British Columbia, Canada, (an area also referred to as the Klappan) has significant ecological values. It is the headwaters of three great salmon watersheds – those of the Stikine, Skeena and Nass Rivers. Skeena River wild salmon alone contribute \$110 million annually to the local economy. The Sacred Headwaters is part of the Spatzizi ecosystem, one of the largest intact predator-prey ecosystems left in BC. This rich and diverse area provides important habitat for BC ‘s largest population of woodland caribou as well as bears, moose and wolves.

In British Columbia, there is currently no commercial production of coalbed methane. In other jurisdictions such as Wyoming, New Mexico, and, more recently, Alberta, coalbed methane developments have fragmented landscapes, contaminated fresh water aquifers and disrupted ecosystems. Coalbed methane has never been developed in a wild salmon watershed. Both British Columbia’s regulations for coalbed methane and their enforcement remain woefully inadequate.

Finally, the Sacred Headwaters area is the traditional territory of the Tahltan people. It is our understanding that the Tahltan have expressed serious concerns about coalbed methane drilling in their territory and while Shell, the British Columbia Government and the Tahltan have engaged in a dialogue process, there is no clear mandate to proceed with any activity. The

GREENPEACE

community, with leadership from the elders, is requesting that drilling activity be postponed until they have completed a land stewardship plan for their traditional territory.

In light of these serious concerns, we the undersigned strongly oppose drilling for coalbed methane in the Sacred Headwaters and advise Shell to refrain from any activity in this area.

Sincerely [alphabetically by signatory organization],
